JOHN MCCLINTOCK
OPERATIONS DIRECTOR HEALTHCARE

John works across a range of healthcare and pharmaceutical projects. Following several years honing his experience as a Chartered Civil Engineer, he returned to the business in 2017 to head up the redevelopment of King's College Hospital's critical care unit, leading the team to a successful completion of a complex, high-spec project in a live hospital environment alongside other healthcare projects.

As McLaughlin & Harvey's healthcare lead, John has overseen and worked across some of our most challenging healthcare projects with particular experience working on live hospital extension projects in busy, city centre locations.

He is passionate about the healthcare sector having spent more than 30 years working across a wide range of projects, and says: "I love the healthcare sector, it's an incredibly rewarding and fulfilling area to work in and brings with it different challenges to other industries I've experienced.

"Collaboration across all stages is essential for healthcare construction. Projects should always have a patient first focus and although we know that working on a live hospital campus will inevitably bring some disruption, it's essential that we minimise this and prioritise maintaining business as usual for the Trust, despite on-going works."

"Increasing public scrutiny on NHS funding and management is a core challenge faced on all projects in this sector. Engagement and collaboration between all parties from the outset is hugely important to us so we can ensure lessons learned from previous projects can be implemented up front and delays and challenges minimised."
